## 722.6 Gearbox modes coding

In the 722.6 gearboxes there are 4 modes available, these are the following:

W/C mode – Starts in 2nd gear for slippery surfaces and holds gears longer.

S mode – Standard mode for the gearbox.

A mode – Holds gears longer and shifts faster, also known as agility mode.

M mode – Manual mode, for manually shifting using either paddles or the shifter.

You can enable the latter two modes using VEDIAMO, *if you've got a passthru cable you will need to use VEDIAMO 4!!*

With the software installed, then go ahead and install Teamviewer and send me a message and I'll code the wanted modes for you.

Available for following TCUs: VGSNAG2, EGS52, EGS53.
